

ABSTRACT

5 A method for manufacturing products with a
coating, wherein from at least one mass comprising at least
natural polymers, a base product is manufactured, while to
at least one part of the product, a coating is applied, a
coating being used having a surface tension which is
approximately equal to or preferably lower than the surface
10 tension of a portion of the mass, at least of the or each
relevant part of the base product to which the coating is
applied.
